BUILDING AND EVALUATING DECISION-MAKING SKILLS

WRMC
2020

A photograph of a snowy mountain landscape. In the foreground, a skier is seen from behind, moving down a snowy slope. The skier is wearing dark clothing and holding ski poles. The background features a large, snow-covered mountain range under a clear blue sky. There are some evergreen trees scattered throughout the scene, particularly on the right side and in the foreground.

PROBLEM: IN THE OUTDOOR INDUSTRY, WE FACE

Ill-structured problems
Complex dynamic environments
Poor feedback loops
High stakes

WHAT'S THE CULTURE AT YOUR ORGANIZATION?

THE TOOLS TO ADDRESS THAT CHALLENGE INCLUDE:

VOCABULARY/
LANGUAGE

CULTURE

SYSTEMS for
IMPLEMENTATION

A skier in a blue and black jacket is seen from behind, skiing down a snowy mountain slope. The skier is wearing a blue helmet and has a backpack. The slope is covered in snow and dotted with evergreen trees. In the background, there are large, snow-covered mountain peaks under a clear blue sky. A large, light blue oval is superimposed over the upper part of the image, containing the text "VOCABULARY/ LANGUAGE" in white, uppercase letters.

BUILDING VOCABULARY AROUND RISK AND DECISION-MAKING

A FEW DEFINITIONS

HAZARD = AN AGENT THAT HAS THE POTENTIAL TO CAUSE HARM

RISK = MEASURES THE LIKELIHOOD OF HARM FROM A HAZARD

North American Public Avalanche Danger Scale

Avalanche danger is determined by the likelihood, size and distribution of avalanches.

Danger Level		Travel Advice	Likelihood of Avalanches	Avalanche Size & Distribution
5 Extreme		Avoid all avalanche terrain.	Natural and human-triggered avalanches certain.	Large to very large avalanches in many areas.
4 High		Very dangerous avalanche conditions. Travel in avalanche terrain <u>not</u> recommended.	Natural avalanches likely; human-triggered avalanches very likely.	Large avalanches in many areas; or very large avalanches in specific areas.
3 Considerable		Dangerous avalanche conditions. Careful snowpack evaluation, cautious routefinding and conservative decision-making essential.	Natural avalanches possible; human-triggered avalanches likely.	Small avalanches in many areas; or large avalanches in specific areas; or very large avalanches in isolated areas.
2 Moderate		Heightened avalanche conditions on specific terrain features. Evaluate snow and terrain carefully; identify features of concern.	Natural avalanches unlikely; human-triggered avalanches possible.	Small avalanches in specific areas; or large avalanches in isolated areas.
1 Low		Generally safe avalanche conditions. Watch for unstable snow on isolated terrain features.	Natural and human-triggered avalanches unlikely.	Small avalanches in isolated areas or extreme terrain.

*Safe backcountry travel requires training and experience.
You Control Your Own Risk by choosing where, when and how you travel.*

BUILD A SAFETY CULTURE

THE CHRISTIAN SCIENCE MONITOR *Bennett*

BUILD A
CULTURE OF
DISSENT
AND
ONE IN WHICH
EVERY VOICE
MATTERS

CULTURE SURROUNDING DECISION-MAKING

- CLEAR EXPECTATIONS
- SAFE ENVIRONMENT TO TRY THINGS ON
- DISSENT IS ENCOURAGED
- SITUATIONAL AWARENESS IS A TEAM SPORT

TRAIN COMMUNICATION

CREW RESOURCE MANAGEMENT

WORKPLACE CHALLENGES

- Hierarchy / Personalities
- Fatigue / Morale

BENEFITS FOR THE WORKPLACE

- Situational Awareness / Self Awareness
- Problem Solving / Decision-Making
- Teamwork / Leadership
- Communication

CREW RESOURCE MANAGEMENT

5 STEP ASSERTIVE STATEMENT PROCESS

- Attention Getter
- State: I have a concern
- State the problem as you see it
- Give a solution
- Ask for buy-in

- Focus on what is right, not who is right!

CREW RESOURCE MANAGEMENT

- *Hey Sarah, Hold up*
- *The slope you're about to ski cut looks wind loaded and firm.*
- *I don't think that ski cutting is appropriate today. It might break farther back than you are now.*
- *Let's back off and put a shot below this pillow where the slab might be thinner*
- *Are you seeing something else here?*

CAN YOU BUILD THIS INTO STAFF TRAINING?

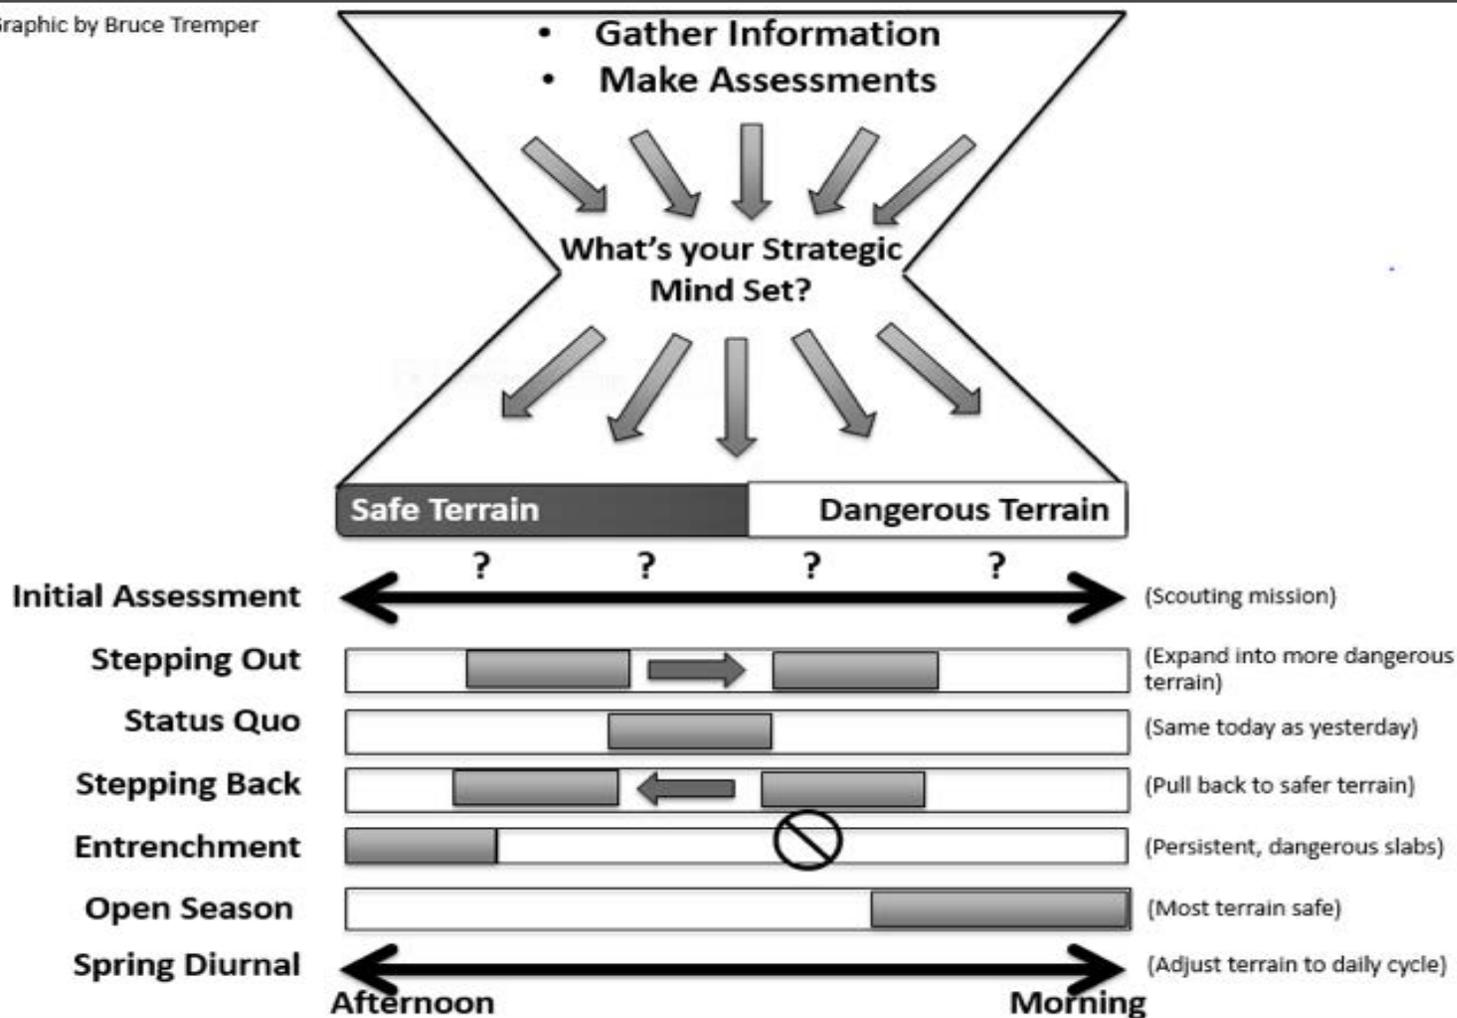

- THROUGH INCIDENTS AND NEAR-MISSES
 - Ask staff to reflect on near misses and incidents.
 - Ask staff to reflect on communication surrounding those incidents.
 - Would CRM techniques have helped?
- THROUGH A ROUND ROBIN OF SCENARIOS

ACCIDENT REVIEWS – A STORY WITHOUT THE OUTCOME

DEBRIEF QUESTIONS

Identify Avalanche Terrain

- Terrain Consistent w/ Pre-Trip Plan?
- Signs of Instability?
- Likelihood / Size of Avalanche(s)?
- Consequences?
- No Go / Go?

- Concerns / Human Factors?
If in doubt → simpler terrain
- Plan
Spacing / Safe Zones / Escape Routes

Post-Trip Discussion

- Any bad decisions today?
- Did you manage terrain well? Improvements?
- Did conditions match forecast?
- Concerns for future tours?
- Observations for avalanche center?

This checklist is to be used as a reference tool only and is no substitute for skill, experience, judgement, and proper education. American Avalanche Institute is not responsible for any injury, accident, or death as a result of this tool.

After Action Review: AAR

Active discussion centered around 4 questions:

What did we intend to accomplish/ strategy?

What did we do? How did we execute relative to our strategy?

Why did it happen that way? Difference between strategy and execution?

What will we do to adapt our strategy/ refine our execution/ repeat our success?

BUILDING DECISION-MAKING SKILLS

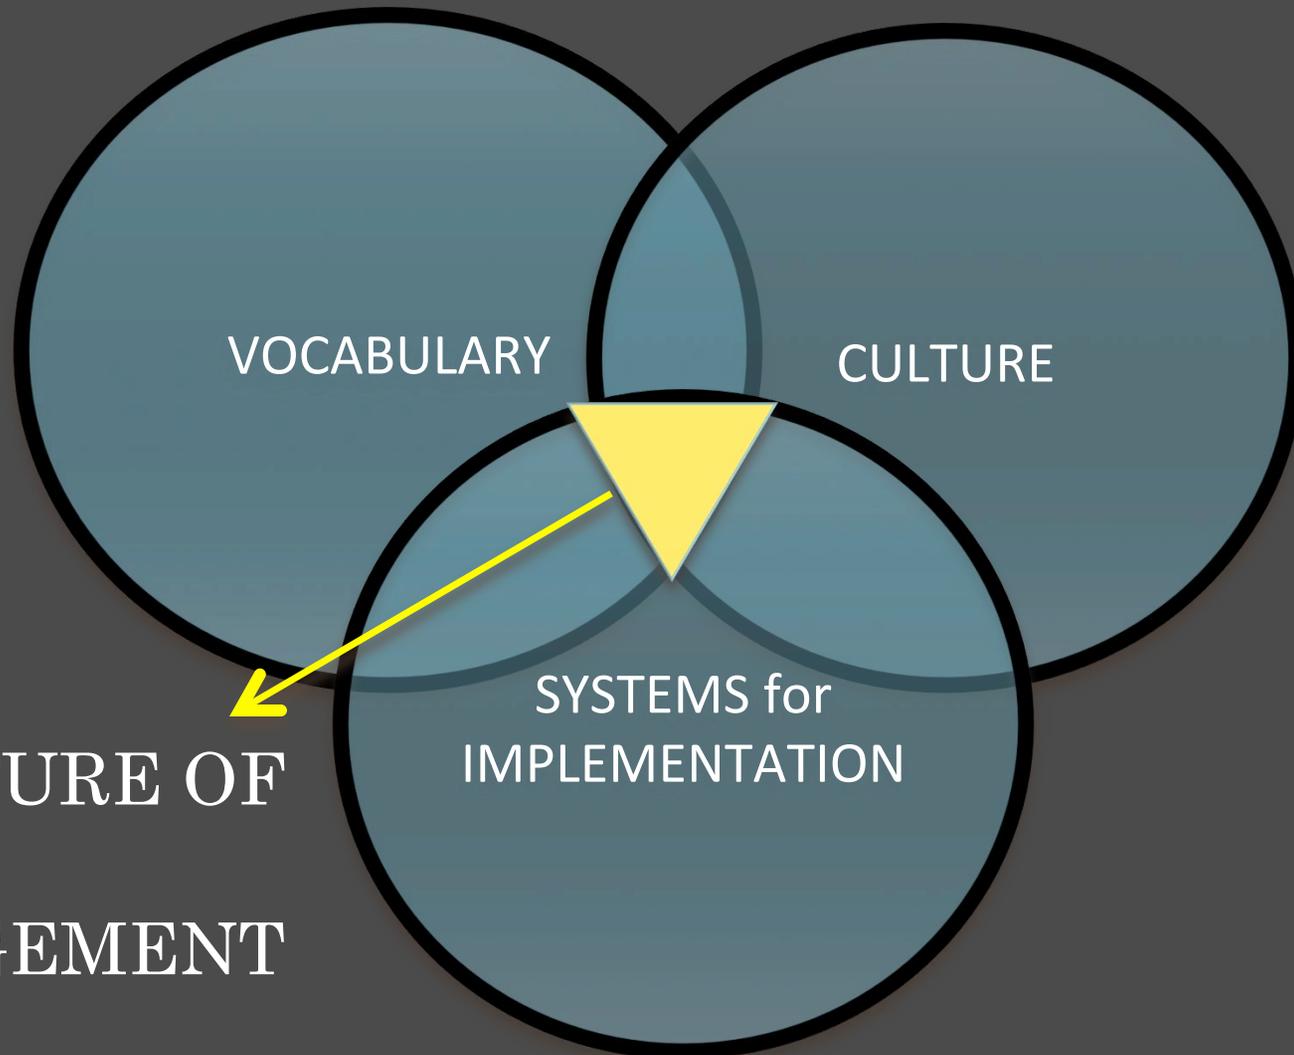

A photograph of a skier in a dark jacket and blue hat skiing down a snowy mountain slope. The skier is in the lower right foreground, leaving tracks in the snow. The background shows a vast, snow-covered mountain range under a clear blue sky. Several evergreen trees are scattered across the slope. Three large, light blue ovals are overlaid on the image, each containing white text. The top oval is on the left, the middle one on the right, and the bottom one is centered.
